Rodeph Sholom School Excavations Final Report

Congratulations on completing your first excavation! Once excavations are completed, archaeologists must analyze their discoveries. This is your next task!

1) Based on your findings and the Israeli timeline, give a date for each layer. Then determine which people lived there during that time. Include evidence to back up your claim.

Strata	Date of the layer	People/Culture	Evidence (how do you know)?
Strata A			
Strata B			
Strata C			

2) Describe the ruins you found in Strata A. What do you think it was used for? Back up your theory with actual evidence (artifacts).

3) In which strata did you find evidence that people at the site traded with other cultures? Explain how you know using artifacts as evidence.

4) What do you think the arrowheads were used for in Strata C? Back up your theory with evidence.

5) What did you like about the excavation?

6) What was difficult about the excavation?
